### *WHY HAANGLAS:*

Vaccum Insulated Glass (VIG) is the future of Increased Glass Performance, and in-roads are being made to manufacture it in the USA. In the meantime, we have imported a number of projects from Haanglas, in Qingdao, China. Offering superior thermal and sound insulation compared to traditional double glazing, their VIG products, available in both standard and high-performance options, are lightweight, durable, and customizable for various applications, leading to significant energy savings and noise reduction.

### *KEY PRODUCTS:*

- **HaanGlas Basic:** This is their more affordable option, featuring fully tempered glass and a U-value of 0.58 W/m<sup>2</sup>.K. It's a great choice for projects where energy efficiency and sound insulation are important, but budget is a concern.
- **HaanGlas Pro:** This is their higher-performance VIG, boasting a U-value of 0.47 W/m<sup>2</sup>.K. It can be made with thinner glass (6.3mm minimum thickness) and offers even better thermal performance.
